SUMMARY

Final-year B.Tech (Artificial Intelligence & Data Science) student and AI engineer with hands-on experience building LLM-integrated, RAG-based, and computer vision systems, plus full-stack applications delivered to real paying clients. Proficient in Python, FastAPI, Flask, and React.js, with measurable impact including a 60% reduction in order-processing time and 35% fewer simulated runway conflicts.

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, JavaScript, SQL

AI / Machine Learning: Machine Learning, Computer Vision, Large Language Models (LLM), Retrieval-Augmented Generation (RAG), Agentic AI, Prompt Engineering, Embeddings, Vector Search, Semantic Search

Frameworks & Libraries: PyTorch, FastAPI, Flask, Streamlit, React.js, Next.js, BeautifulSoup, Playwright

Tools & Platforms: Git, GitHub, Docker, REST APIs, Vector Databases, HTML5, CSS3

Core Computer Science: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Management Systems

PROJECTS

AI Lead Intelligence & Automation Platform

[GitHub Repository](#)

Python, BeautifulSoup, Playwright, LLM APIs, REST APIs

- Built scalable web-scraping pipelines using Python, BeautifulSoup, and Playwright (stealth mode) to extract management-level contact data from company websites into structured APIs and dashboards.
- Integrated LLM APIs into automation workflows and designed REST APIs powering AI-driven business processes.
- Developed backend services to process structured and unstructured business data for intelligent retrieval.

AI-Powered Digital Twin for Critical Infrastructure

[GitHub](#)

Python, FastAPI, Computer Vision, Machine Learning, GIS

- Architected a Digital Twin platform for infrastructure risk monitoring in Sangli District, integrating GIS, IoT sensor, environmental, satellite, and historical data through a FastAPI backend.
- Combined crack detection (computer vision), flood-risk prediction, and time-series forecasting into a centralized Risk Manager for risk scoring and automated alert escalation.

QR-Based Ordering & Billing System — Client Project

Python, Flask, React.js, Vite, REST APIs, SQL

- Built and deployed a full-stack QR-based ordering and billing platform for a real paying restaurant client.
- Developed an admin dashboard for menu, order, and payment management; automated billing workflows reduced order-processing time by 60%.

SkySlot AI — Intelligent ATC Slot Allocation System

[GitHub](#)

Python, Machine Learning, Streamlit, Data Analysis

- Designed AI-based runway slot-scheduling algorithms that reduced simulated runway conflicts by 35%.
- Built an interactive dashboard to monitor aircraft queues and runway utilization in real time.

Guts — AI Voice & Text Assistant (RAG)

[GitHub](#)

Python, FastAPI, Flask, Streamlit, RAG, Vector Database, REST APIs

- Built a modular voice/text assistant powered by a RAG pipeline and vector database for context-aware responses.
- Integrated weather, web search, and date/time utilities via external APIs using an extensible, tool-based architecture.

Samruddhi Polyplastic — Company Website (Freelance)

[GitHub](#)

React.js, Next.js, JavaScript, HTML5, CSS3, Netlify

- Designed, built, and deployed a responsive, SEO-optimized website for a plastics manufacturer, working directly with the client from requirements to production launch.

EDUCATION

Annasaheb Dange College of Engineering and Technology, Ashta

Expected 2027

B.Tech, Artificial Intelligence and Data Science

CERTIFICATIONS

- Anthropic — Claude & AI Certifications (5 courses)
- NPTEL — Leadership & Team Effectiveness (Elite)
- Forage — Walmart, Deloitte & Tata Virtual Experience Programs

ACHIEVEMENTS & LEADERSHIP

- Event Coordinator, Discovery & Neuroverse Tech Fest (300+ participants), 2025–26
- Sports Coordinator, ADCET
- University Zonal & Inter-Zonal Boxing Gold Medalist; National-Level Boxing Participant, 2026
